

# DocuShare 2.0 Administration Guide

Please read **Getting Started** completely before performing any administrative functions. These functions are available primarily through the DocuShare Administration screens located at: <http://docushare-server/dscgi/admin.py/adminhome>.

The **DocuShare Administration** screens support five administration categories, corresponding to chapters two through six of this manual. Other administrative functions, such as changing a user's password, are available anywhere in the site when logged into DocuShare using an administrator account. In addition, a small number of maintenance utilities are provided as command line routines that are not available via the administrative web interface because they require server shutdown during their operation.

## Table of contents:

1. **Getting Started**  
Quick overview of how to setup, customize and maintain a DocuShare site, and the role of being a DocuShare Site Administrator.
2. **Setting Object Properties**  
Set the default initial property values that appear in object creation forms (e.g., Add File) and define new custom properties for each object.
3. **Configuring the Server**  
Set configuration parameters, enter the server license authorization key, configure the server for SSL, and change the physical location of the document repository.
4. **Maintaining the Server**  
Routine maintenance operations to keep your DocuShare server running efficiently.
5. **Managing Accounts and Site Access**  
Perform a wide variety of account and access-related tasks, including setting site access policies, granting site administrator privilege, and maintaining users and groups.
6. **Managing DocuShare Content**  
Edit server appearance characteristics, define its supported Mime Types, manage general site content and parameters, and generate user statistic reports.
7. **Advanced Customization**  
Use command line scripts to increase DocuShare functionality.
8. **Administrator Tips and Suggestions**  
Additional tips for managing a DocuShare site such as Managing Repository Growth, Backup Suggestions, Rotating Log Files and Object Restoration.
9. **Appendix A: File Format Support**  
The list of proprietary file formats currently supported by DocuShare for document content-level indexing and HTML conversion.
10. **Appendix B: Virus Scanning**  
The DocuShare procedures to follow for scanning and curing viruses .
